

TODARIDE

INCOME & PROMOTION STRATEGY

Recommended Revenue Model, Passenger Rewards, Referral Growth & Community Promotion

Core principle: Rewards should generate additional rides and customer loyalty—not simply become an operating expense.

1. TodaRide Business Model

Build TodaRide around three complementary income engines: ride revenue, advertising/product promotions, and partnerships. The passenger rewards system should increase acquisition, engagement, referrals and repeat rides.

Income Engine	Examples	Priority
Ride Commission	Platform commission on completed rides after pilot	PRIMARY
Direct Advertising	Local businesses, banners, sponsored promotions	HIGH
Product Promotions	Merchant offers, coupons, featured listings	HIGH
Partnerships	Corporate/community campaigns and sponsorships	MEDIUM-HIGH
Google Advertising	Appropriate advertising where practical	SECONDARY

Recommendation: Prioritize direct local advertising over generic advertising once TodaRide has enough active users.

2. Six-Month Founding Partner Pilot

Offer zero TodaRide platform fees during the first six months to reduce the barrier for TODAs and drivers to join. Position this as a limited Founding Partner Program—not a permanent free service.

Period	Primary Objective
Months 1–2	Controlled pilot; test bookings, driver acceptance, GPS, notifications, payments, safety and support.
Months 3–4	Expand TODAs and passengers; strengthen community promotion and referrals.
Month 5	Scale and measure adoption, retention, safety and economics.
Month 6	Evaluate the operating model; decide whether to monetize, improve or extend the pilot.

Important: During the free period, calculate theoretical commissions internally (e.g. 5%, 7.5%, 10%) so the economics are known before charging.

3. Passenger Rewards — TodaRide Coins

Create a rewards wallet that turns valuable passenger actions into ride credits. The exact values should be configurable and optimized during the pilot.

Passenger Action	Illustrative Reward
Account registration	50 Coins
Phone/account verification	50 Coins
First completed ride	100 Coins
Complete ride rating	5–10 Coins
Meaningful review/feedback	15–20 Coins
Successful referral	100 Coins after referred user completes first ride
Approved social-media campaign share	20 Coins, subject to limits
Ride challenge	50–250 Coins
Safety profile / education	50–100 Coins

Keep Coins primarily as non-transferable, non-withdrawable ride credits. Do not reward 5-star ratings; reward completion of honest feedback.

4. Referral Program

Give every passenger a unique referral code. Award the referrer and new passenger only after the new passenger verifies the account and completes a qualifying first ride. This discourages fake-account farming.

5. Social Media Promotion

Use campaign-based rewards such as “Share TodaRide — Earn 20 Coins.” Set daily/weekly limits and validate participation where practical. Start with one Social Media / Community Manager supported by TODA Community Ambassadors.

6. Driver Rewards

Behavior	Possible Reward / Benefit
Completed rides	Driver points or incentives
Good passenger ratings	Points / recognition
Low cancellation rate	Performance status
Safety training	Bonus points / badge
Updated documents	Compliance points
Driver referrals	Referral incentive
Strong service performance	Bronze / Silver / Gold / Elite status

7. Local Business Promotion Network

Create TODARIDE BUSINESS PARTNERS for local businesses such as restaurants, pharmacies, convenience stores, water refilling stations, motorcycle shops, schools, banks/e-wallets and other merchants.

Package	Possible Starting Offer
Basic	Business listing + logo + contact information
Standard	Featured listing + promo coupon + app placement
Premium	Featured promotion + targeted location + sponsored notification + passenger rewards campaign

Illustrative pricing: Basic ■500/month; Standard ■1,500/month; Premium ■3,000–■5,000/month. Validate pricing with actual advertiser demand.

8. TodaRide Rewards Wallet

Wallet Feature	Example
Coin balance	1,250 Coins
Ride-credit value	■62.50 equivalent ride credit (illustrative)
Earn	Ride • Rate • Refer • Approved campaign • Challenge
Redeem	Apply Coins toward eligible ride credit

Example redemption: 100 Coins → ■5 ride credit; 200 → ■10; 500 → ■25. These are illustrative and should be optimized against real ride economics.

9. Anti-Abuse Controls

- Limit social-sharing rewards per campaign/day/week.
- Award referral rewards only after a qualifying ride.
- Reward honest feedback, not 5-star ratings.
- Detect duplicate accounts and suspicious referrals.
- Consider promotional Coin expiration rules.
- Keep Coins non-transferable and non-withdrawable.
- Record every reward movement in a reward ledger.

10. TODARIDE Growth Flywheel

More drivers → more available rides → **more passengers** → more bookings → **more rewards and referrals** → more passengers → more bookings → **more business value** → more TODAs want to join.

11. Recommended Technical Modules

Module	Purpose
reward_wallet	Passenger/driver reward balance
reward_transactions	Immutable earning/redemption ledger
reward_rules	Configurable reward amounts and limits
referral_codes	Unique referral codes
referral_transactions	Track qualified referrals
promotional_campaigns	Social and engagement campaigns
advertiser_accounts	Business partner management
advertisement_campaigns	Paid promotion inventory
ride_credits	Credits applied to eligible rides
reward_redemptions	Track reward use

12. Recommended Priority

Priority	Action
1	Stabilize the core ride experience.
2	Recruit and support TODA pilot partners.
3	Implement safety and verification.
4	Implement Passenger Coins and referrals.
5	Add local business promotion tools.
6	Track theoretical future commission during the free pilot.
7	Use Month 5–6 data to determine sustainable monetization.

Final recommendation: Use the six-month free pilot to maximize users, rides, retention, referrals and data. Monetization should follow demonstrated value and sustainable economics rather than being rushed.

Prepared as a proposed strategy for TodaRide. Pricing, commission rates, rewards and financial treatment should be validated using pilot data and appropriate professional advice.
